# Overview

---

- **Introductory comments**
- **10 genres of learning environments**
- **Recommended funding priorities**

# Introductory comments

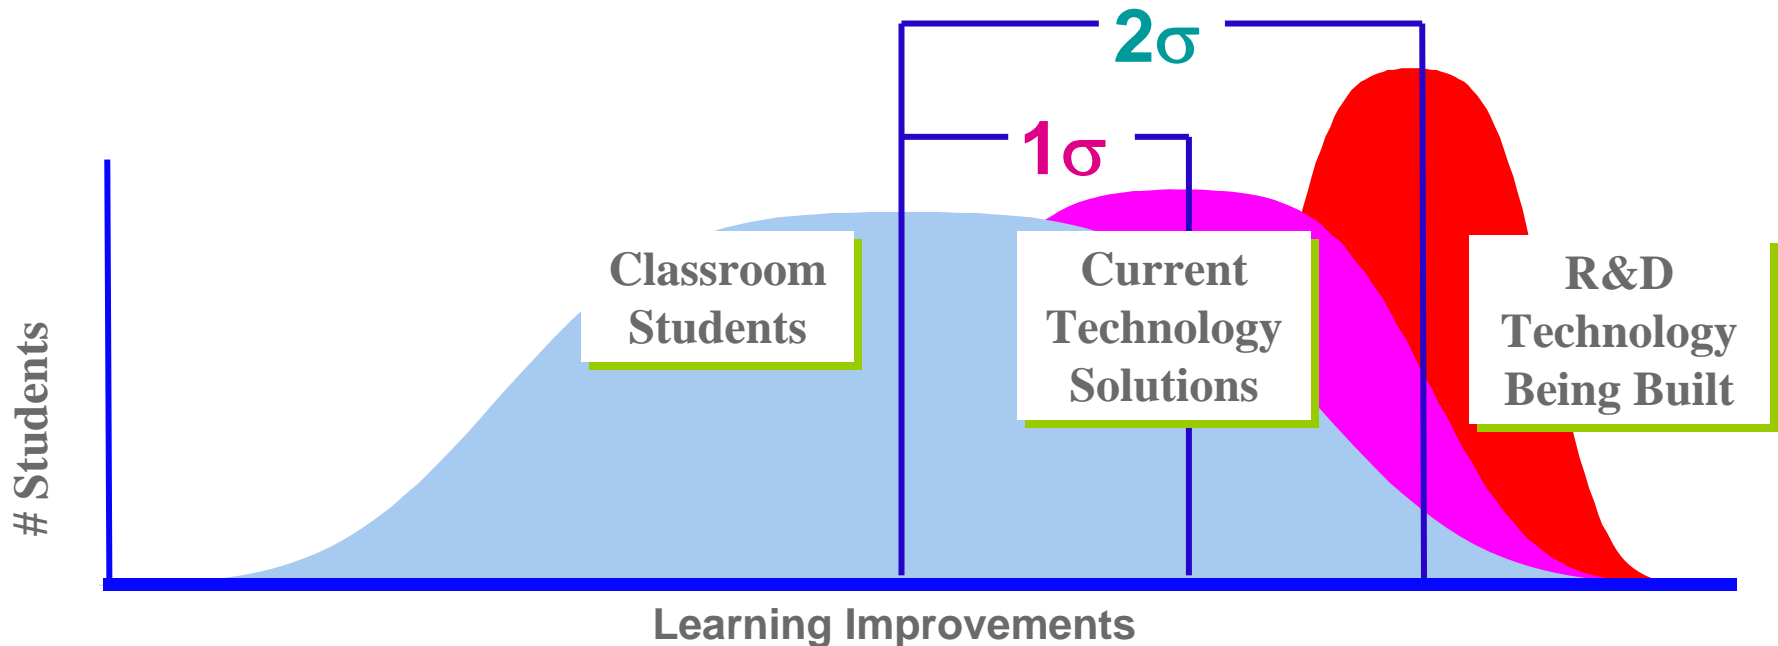

---

- Learning technologies are only as good as the underlying pedagogy (Bransford, Clark, Cuban, nearly everyone)
- Advanced Distributed Learning initiative ([www.adlnet.org](http://www.adlnet.org))
  - Fortify learning environments with science and good engineering
  - SCORM standards to make content sharable, reusable, interoperable, extendable
  - Cutting costs by standards and repositories
- Growth of learning sciences in different funding agencies

# How much learning improvement?

2 sigma goal (Bloom, 1984)

Average tutored student's achievement will be better than 98% of classroom students

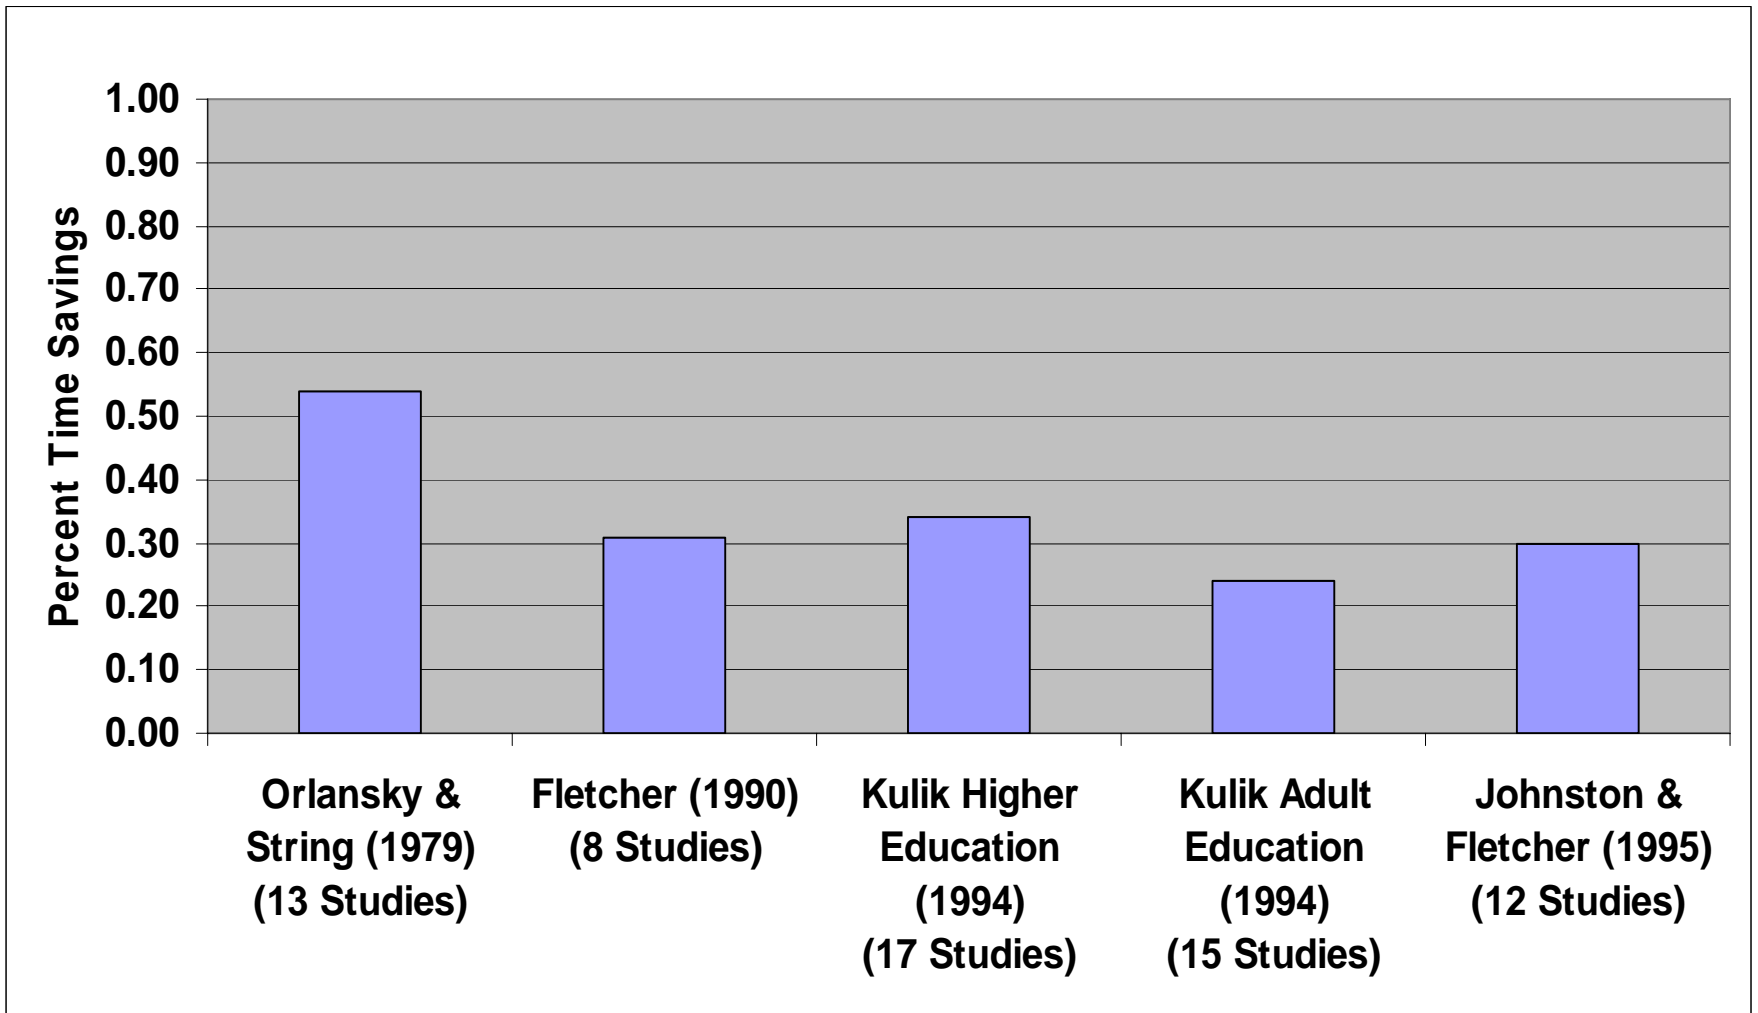

# Learning Gains of Technology-based Instruction (*Dodds & Fletcher, 2004; Wisner & Fletcher, 2004*)

*\*Measured in Standard Deviations*

# Percent Time Savings from Technology-Based Instruction

# Costs and ROI's

---

- **\$10,000**                      **10 hours of CBT**
- **\$100,000**                    **Course with multimedia**
- **\$1,000,000**                 **Hypertext/hypermedia**
- **\$10,000,000**               **Intelligent tutoring system**
- **\$100,000,000**              **Serious multiparty game**

# Characteristics of learners that we wish were better

---

- **Distributing their learning over time**
- **Focus on deep rather than shallow knowledge**
- **Tolerance for boring learning material**
- **Self-regulated learning, monitoring, & error correction**
  - **Learners need modeling, scaffolding, & guidance**
- **Learner question asking**
- **Comprehension calibration**
- **Precise articulation of knowledge**

# Pedagogical strategies rarely used by typical human tutors and learning environments

---

- Socratic tutoring (*Collins, Stevens*)
- Modeling-scaffolding-fading (*Rogoff, Gardner*)
- Reciprocal training (*Brown, Palincsar*)
- Anchored Learning (*Bransford, CTGV*)
- Situated learning (*Greeno, Lave, Wender*)
- Embodied learning (*Glenberg, Nathan*)
- Error diagnosis & repair (*VanLehn, Lesgold*)
- Building on prerequisites (*Gagne*)
- Sophisticated motivational techniques (*Lepper*)

# Principles of deep learning in respectable learning environments

---

1. Active construction of meaning
2. Explanation
3. Coherence & connections
4. User modeling & adaptive responding
5. Interactive simulation
6. Dialog scaffolding
7. Inquiry through question asking & answering
8. Cognitive disequilibrium
9. Cases & scenarios
10. Metacognitive strategies
11. Overlearning & automaticity
12. Conscious deliberation & reflection

# TMGL Landscape

---

- **T**echnologies
- **M**echanisms of pedagogy and psychology
- **G**oals of learning environment
- **L**earner characteristics

# Genres of Learning Environments

---

- **Computer-based training**
- **Multimedia**
- **Interactive simulation**
- **Hypertext and hypermedia**
- **Intelligent Tutoring Systems**
- **Inquiry-based information retrieval**
- **Animated pedagogical agents**
- **Virtual environments with agents**
- **Serious games**
- **Computer supported collaborative learning**

# Intelligent Tutoring Systems

---

- **SOPHIE** (Brown) -- electronic circuits
- **GUIDON** (Clancy) -- medicine
- **WHY** (Stevens, Collins) -- meteorology
- **PACT** (Anderson, Corbett, Koedinger) algebra, geometry, computer languages
- **SHERLOCK** (Lesgold) -- basic electronics and devices
- **ANDES** (VanLehn) – physics
- **DIAGNOSER** (Hunt, Minstrell) -- physics
- **Intelligent Essay Assessor** (Landauer, Foltz) – writing
- **AutoTutor** (Graesser) – physics, computer literacy, critical thinking

# Computer Literacy

Graesser, Lu, Jackson, Mitchell, Ventura, Olney, & Louwerse (2004)

How is the packet switching model of message transmission like the postal system?

Packets are sent to intermediate destinations before being routed to their final destination.

The sun exerts a gravitational force on the earth as the earth moves in its orbit around the sun . Does the earth pull equally on the sun? Explain why.

**Talking head**

- Gestures
- Synthesized speech

▪ Presentation of the question/problem

Log of previous turns

moves in its orbit around the sun . Does the earth pull equally on the sun? Explain why.  
Student:  
Tutor: Is there anything you can add to this?  
Student:  
Tutor: Kind of.  
Tutor:  
Tutor: How does Newton's law of motion apply to this situation?

# Conceptual Physics

(VanLehn, Graesser, et al., 2007)

## Three tutoring conditions

- AutoTutor
- Read textbook
- Read nothing

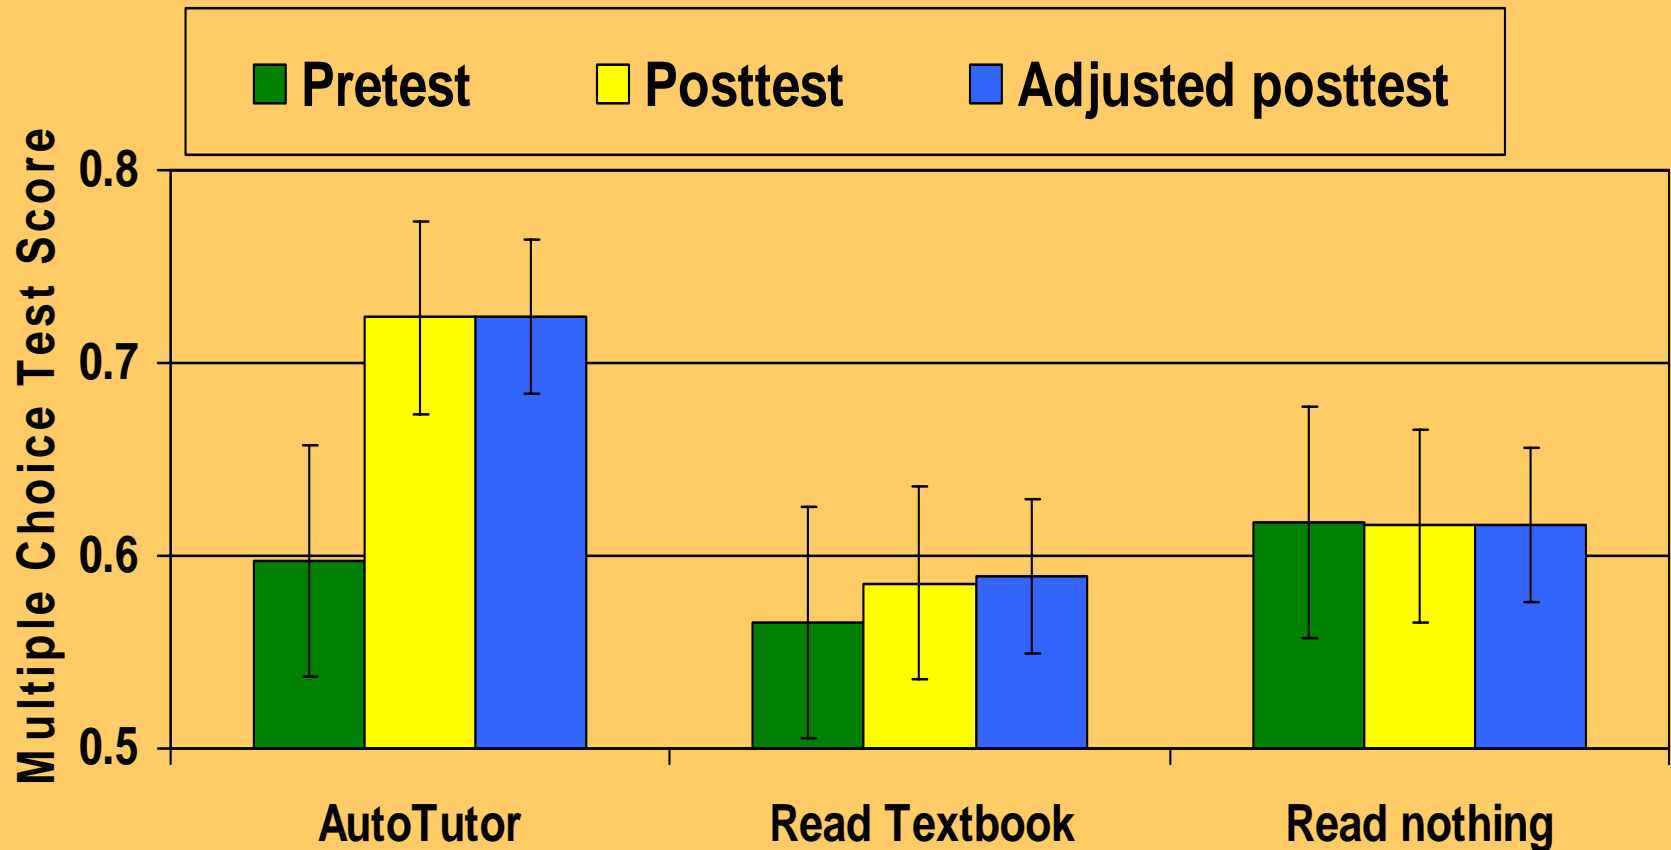

# Example Multiple Choice Test Item (similar to Force Concept Inventory)

---

As a truck moves along the highway at constant speed, a nut falls from a tree and smashes into the truck's windshield. If the truck exerts a 1,000 N force on the nut, what is the magnitude of the force that the nut exerts on the truck?

- a) 1,000 N
- b) less than 1,000 N
- c) N (the nut does not exert a force on the truck)
- d) greater than 1,000 N (because the nut hit the truck, it exerts a greater force on the truck than the truck exerts on the nut)

# Multiple Choice Test on Physics

# Affective States

(Graesser, Craig, D'Mello, Picard's Affect Computer Lab at MIT)

- **Confusion**
- **Frustration**
- **Boredom**
- **Flow**
- **Delight**
- **Surprise**

AutoTutor text dialog

# How might AutoTutor be responsive to the learner's affect states?

---

- 1) If learner is **frustrated**, then AutoTutor gives a hint.
- 2) If **bored**, then some engaging razzle dazzle
- 3) If **flow/absorbed**, then lay low
- 4) If **confused**, then intelligently manage optimal confusion

# Recommended Funding Priorities

---

- 1) Blended instruction that assigns optimal learning environments to a particular learner at the right time.**

# Ideal Vision

LOG OFF

### Passage

For as long as there have been forests, lightning has been igniting forest fires. In the past, these fires simply burned themselves out because there was no way to stop them. **With the development of modern technology (airplanes, powerful water pumps, chemicals) we now have the means to put out many of these fires.**

### Self-Explanation Codes

Black = Monitoring      Blue = Paraphrasing      Green = Prediction  
Orange = Elaboration      Red = Bridging

---- Self-Explanation for sentence 2 ----

So these fires that have been started from lightning - which means they kept burning until they stopped **without the help of a fire truck or anything** - so there was no way to stop them. So I'll probably get an explanation of why there was no way to stop the fires.

### Self-Explanation

Yes, now we have airplanes and stuff to fight fires. Before, the fires burned themselves out. So the development of modern technology, means there are people who are working on ways to stop fires and they use airplanes, and water pumps, and chemicals to actually put out fires. So that means there is actually a chemical out there which is used to put out fires.

NEXT

REPEAT

What strategies were used?  
Please select one of the options:

- Monitoring
- Paraphrasing
- Prediction
- Elaboration
- Bridging

# iSTART Modules

- **Introduction Module**

- Teacher-Agent and 2 Student Agents discuss reading strategies
- Quiz after each strategy
- Mini-Demonstration after first 3 strategies

- **Demonstration Module**

- Genie self-explains a text
- Merlin provides feedback
- Trainee is asked to identify strategies

- **Practice Module**

- Trainee types self-explanations to science text
- Merlin guides the trainee and provides feedback

# Recommended Funding Priorities

---

- 3) Modeling and testing the conditions in which interactive simulation with multimedia promotes deep learning**

When a car without headrests on the seats is struck from behind, the passengers often suffer neck injuries. Why do passengers get neck injuries in this situation?

Question

# Recommended Funding Priorities

---

- 4) Systematic tests of the impact of serious games on learning.**

# Recommended Funding Priorities

---

- 5) Examining the process of authoring advanced learning environments.**

# Recommended Funding Priorities

---

- 1) Blended instruction that assigns optimal learning environments to a particular learner at the right time.**
- 2) Agents that model and scaffold the use of complex learning environments and human-computer interfaces.**
- 3) Modeling and testing the conditions in which interactive simulation with multimedia promotes deep learning.**
- 4) Systematic tests of the impact of serious games on learning.**
- 5) Examining the process of authoring advanced learning environments.**

# Fishics AutoTutor

**Andrew Olney**

# How does AutoTutor compare to comparison conditions on tests of deep comprehension?

---

- **0.80** compared to pretest, doing nothing, and reading the textbook
- **0.22** compared to reading relevant textbook segments
- **0.07** compared to reading succinct script
- **0.13** compared to AutoTutor delivering speech acts in print
- **0.08** compared to humans in computer-mediated conversation
- **-0.20** compared to AutoTutor enhanced with interactive 3D simulation

# Challenges of generalization

---

- **Classic Hayes and Simon study on problem isomorphs**
- **Important role of surface features, versus the more relevant deep relational constructs (Chi, Gentner, Forbus)**
- **A 1-2 hour intervention is rarely effective, versus distributed training on a large number of diverse cases**
- **Situated context often frames, compartmentalizes, and constrains**
  - **Life never announces the relevant chapter to study**
  - **Formal versus informal environments**
  - **Broken dishwasher anecdote**

# Conclusions

---

- **Advanced learning technologies can be used to manipulate characteristics and parameters of complex learning environments that resemble everyday experiences.**
- **We can measure impact of these environments on measures that vary in grain size.**
- **The impact of these learning environments on learning is adequately documented and either impressive or promising.**
  - **except for games and VR – where there are few studies.**
- **The jury is still out on matters of generalization.**

# Landscape of Learning Traditions and Paradigms

## **Psychology**

Associationism  
Classical conditioning  
Operant conditioning  
Modeling  
Verbal learning and memory  
Developmental theories

## **Education**

Games

# Analysis of Tutorial Dialogue Patterns

---

- **Unskilled human tutors**
  - Most tutors are unskilled: Cross-aged, paraprofessions, peers
  - Unskilled tutors are very effective (**Cohen, Kulik, & Kulik, 1982**)
  - 100 hours of video transcribed and analyzed (**Graesser & Person, 1994; Graesser, Person & Magliano, 1995**)
- **Accomplished human tutors no doubt do better**
  - Studies by **Bloom, Chi, Collins, Derry, Evens, Fox, McArthur, Norman**
  - New ONR project by **Person**

# Affective States

- **Confusion**
  - a noticeable lack of understanding
- **Frustration**
  - dissatisfaction or annoyance
- **Boredom**
  - being weary or restless through lack of understanding
- **Flow**
  - state of interest that results from involvement in an activity
- **Delight**
  - a high degree of satisfaction
- **Surprise**
  - wonder or amazement, especially from the unexpected
- **Neutral**
  - no apparent emotion or feelings
