

Gooloo S. Wunderlich is a senior program officer at the Committee on National Statistics. She has over 50 years of experience at the program and policy levels in health and population policy analysis, research, and statistics in the U. S. Public Health Service, President's National Advisory Commission on Rural Poverty, the Bureau of the Census, and at the National Academies. Her professional interests and experience have focused on the conduct and analysis of national health surveys, analysis and public policy formulation relating to population research, family planning, aging, long-term care, disability, and a wide range of health policy issues. At the National Academies she has served as study director for numerous projects including: the workshop on Improving the Measurement of Late-Life Disability, Review of the National Children's Study Research Plan, USDA's Measurement of Food Insecurity and Hunger, the Future of Rural Health, the Social Security Administration's Disability Decision Process Research, Improving the Quality of Long-Term, Adequacy of Nurse Staffing in Hospitals and Nursing Homes, and the National Health Care Survey. She is currently serving as study director for the workshop on Improving the Health Care Cost Projections for the Medicare Population. Prior to joining the National Academies she was director of the Division of Data Policy, Office of the Assistant Secretary for Health in the Department of Health and Human Services, serving for many years as the focus throughout the Public Health Service for data policy development, planning, analysis, coordination of health information systems, and statistical activities. She directed the review and approval of statistical, research, evaluation, administrative, and regulatory data collection activities throughout the Public Health Service agencies. She is an elected member of the National Academy of Social Insurance. She received her B.A., M.A., and Ph.D. degrees from the University of Bombay, India, and has completed two years of post-doctoral studies in sociology and demography at the University of Minnesota and the University of Chicago.
